AFRICA, EAST COAST—PORT OF BARTHOLOMEU DIAS

General Instructions.

No. 29 (first publication).—The following Notice to Mariners (No. 2 of 1906), issued the Bombay Government, is republished for general information :—

The following information, dated September 1905, has been received from the Port Officer, Beira, through the Consul General for Portugal in British India :

The port is marked by beacons on land. These are six in number giving three courses of which the bar may be crossed and the harbour entered with absolute safety.

Beacons of the Harbours.

The bearing of the first pair of beacons Nos. 1 and 2, when in line, is S. 83° W., that the second pair Nos. 3 and 4, S. 10° W., and of the third pair Nos. 5 and 6, is S. 10°

Situation of the Harbours.

Beacons Nos. 1 and 2 are on the land covered by the mangroves, where the East end of the bay and the port of Bartholomeu Dias properly speaking begins.

The bearing of these beacons is tangent to the southern border of a dense and tall grove of pines (movinjes) which rises on the S.-E. extremity of the Movin-jes or Maconds island.

The grove is conspicuous to any one entering the port, since it rises from the sea, as a green clump of verdure, and is seen standing out alone before sighting the margin of the bay. It is a splendid landmark.

Beacon No. 1 is a quadrilateral tower surmounted by a triangular appendix, jutting out slightly over the sides of the tower. It is 20 metres high and 2 metres broad. The tower on the seaward side is painted in three vertical stripes, the one in the centre being black and those on the sides white. The triangular appendix is white with a black circle in the centre.

Beacon No. 2 is a triangular tower also ending in a triangular appendix, it is 25 metres high and 3.50 metres broad, and is alternately opened and closed in horizontal bands of 3 metres. The part which is covered is painted black so that the impression is produced of black bands alternating with others of light blue or gray.

The triangle is painted black with a white circle in the centre.

Beacon Nos. 3 and 4 are situated within the port, on the W. shore, on an unmistakable site locally called 'Chamadouro da Pedra.' On the border of this low and slightly undulating land, which is in general of a dark green tone, owing to the mangroves that cover it, there suddenly rises, forming a point, a yellowish white patch which looks like a big rock out vertically with the shore. In the whole port of Bartholomeu Dias this feature is unique and may be seen over the sands forming 'Macovane Point' soon after entering the first part of the channel: as marked by beacons Nos. 1 and 2.

Beacon No. 3 is in the shape of a column surmounted by a square, of which two opposite angles are fixed vertically on the prolongation of the axis of the column. It is black having in the centre another white square.

Beacon No. 4 is a tower exactly like beacon No. 2, but of smaller dimensions 18.50 mr. high and 2 mr. wide.

Beacons Nos. 5 and 6 are situated near 'Govuro Point' which is covered by a clump of tall pines, and here the commandant's house or residency stands. The house is not seen as it is surrounded by trees, but the point is clearly distinguished a little before leaving the second part of the channel, not only by the special form of the trees but also by the wooden jetty and by the flagstaff rising a few metres from it.

Beacon No. 5 is in the shape of a column, painted in three vertical bands, the centre one being black and the others white. It ends in a triangular appendix, painted white with a black circle in the centre. It is 11.75 mr. high and 0m. 80 mr. wide.

Beacon No. 6 is also a column, surmounted by a square, having arcs painted black in the angles, and two concentric circles in the centre of the figure; the outer being black and the inner one white.

The column is painted in black and white horizontal bands. It is 16 mr. high and 1 wide. The beacon is seen between two dense mangrove clumps, the one on the west growing up to the water's edge.

Currents.

The wide bay which precedes and serves as a sort of vestibule to the Port of Bartholomeu Dias between Macovan Point on the S. and Macomene on the N. has both at flood and ebb tide a complex system of currents which must be taken into account when entering and leaving the port.

This is due to the fact that many rivers and rivulets besides the Govuro flow into the outer basin and the influence of the mouth of the Save is strongly felt. Thus the tide has to flow simultaneously on the S. after passing the N.-W. point of the peninsula, to enter the port and to the W. and N. to enter the canals and rivers near the north and centre of the basin. As the volume of water is greater in those two directions owing to the area to be covered being larger, the current at flood tide during the passage of the part of the channel marked by the beacons 1 and 2 is felt running N.-W. At ebb tide is the contrary, the current running towards S.-E. and being stronger than during flood tide.

In the second part of the channel (marked by the beacons 3 and 4) the chief influence owing to its proximity, is that of the mouth of the Govuro, the flood tide runs W.-S.-W. deflecting to the S. inside the port. The ebb tide runs E.-N.-E. and is stronger than the flood tide.

In the third part of the channel (marked by beacons 5 and 6) the direction and strength of the tide is the same as in the preceding part, until the N.-W. point of the peninsula is reached; from that point the ebb and flow currents run parallel to the shore.

Instructions on entering and leaving the port.

From the above notes on the currents the following simple directions are deduced:—

In the first part of the channel.

With flood tide keep the beacons well in line.

With ebb tide let beacon No. 2 open out on the N. of beacon No. 1 until the S. side. the former is tangent to the N. face of the latter. Thus is corrected any setting of the vessel to the S. which helped by the strong current at ebb tide, might have thrown it on the bank which borders the land from Macovane Point to the extreme W. of the Govuro peninsula. The highest point of this bank is naturally marked by the line determined by the 'Chamadouro da Pedra' and by a group of three big trees which rise behind it, and are distinguished in the low green mangrove.

The direction of this line is S. 27° W. and after passing the point the beacons may follow even with strong ebbs, until the vessel enters the second part of the channel.

In the second part of the channel.

With flood tide keep beacons 3 and 4 well in line. With ebb tide let No. 4 open a little on the W. of No. 3, to avoid the current carrying the ship toward the point of the tongue of sand which projects N.-N.-W. of the peninsula, which may generally be distinguished by the lighter colour of the water.

In the third part of the channel.

With flood tide keep beacons 5 and 6 in line.

With ebb tide let the beacon 6 open slightly to the W. of No. 5 until the point of the peninsula is passed, then follow the land and seek anchorage freely.

Floating mark.

To the W. of the third part of channel and very near it E. and W. of the small bend which forms the N.-W. corner of the right margin of the bay, there is a barrel painted red.

It marks a patch which is covered by 11½ feet of water at low water spring tides. From this mark inwards parallel to the land the port has a depth of 6 fathoms to close to the shore, the bottom being sand and mud.

This mark is also of great service when leaving the third part of the channel and entering the port.

Anchorage.

It may be said in general that ships may safely anchor in two long lines of more than a mile in extent parallel to the shore, starting in the N.-W. corner and ending in the small bay on the S. point of which beacon No. 6 is placed.

At present, the usual anchorage is near the jetty referred to, on either side of it, and here the depth is 7 to 8 fathoms, with a bottom of mud or sand.

The port is protected from all winds, though those blowing over low lands, when very strong, cause a rough sea, but as there is no space for waves to form, on the E. owing to lying so close to the shore, and on the S.-W. owing to the succession of banks which guard the port in that direction, and as it is splendid holding ground, ships run no risk of dragging their anchors or wearing their moorings.

Bearings.

The following are the bearings to enter the first channel when going into the port:—

Inhamabue Point (situated S.-E. and immediately following

Macovane Point) S. 25° W.

Macovane Point S. 39° 30' W.

Point E. of the Mueve island (situated E. of the high land of "Machanga" at the entrance of the "Save") N. 14 E.

The point determined by these bearings is in the extension of the line passing through beacons Nos. 1 and 2 and is almost on the E. edge of the bank at the entrance. The depth is 6 fathoms.

Lowest soundings in the channel.

The lowest soundings are to the E. of the outer bank, which runs uninterruptedly from Inhamabue Point to 1½ miles beyond Mafomene Point. Three small patches were found at low water spring tides of 13½ feet.

In the rest of the channel the depth varies from 18 to 35 feet at low water.

Establishment of the port.

4h. 50m.

Vertical rise of tides.

Spring rise	12 feet.
Neap tide rise	7½ feet.

Coordinates of Macovane Point.

Latitude 21° 52' S.

Longitude 85° 12' E. Greenwich.

All bearings are magnetic.

Bankot buoys.

No. 30 (Publication).—The Bombay Government has given notice (No. 3 of 1906) that the force of the Bankot buoys this year was not sufficient to dislodge the Bankot buoys from their moorings, which have remained intact in their places.

2. The channel at Bankot has a little to the East of that marked by the present buoys, but as there is always a depth of 7½ feet of water in the buoys channel, it is proposed not to shift the buoys, as the present position will mark the proper channel.

Durour island—Amended position.

No. 46 (first publication).—With reference to notice to Mariners No. 461, dated 25th November 1905, issued by this Office, the British Admiralty has given further notice (No. 1384 of 1905) that the position of Durour island, north-east coast of New Guinea, has been fixed by the officers of H.M.S. *Moore*.

The latitude of the eastern point of the island was determined by meridian altitude, taken on shore, to be $1^{\circ} 27' 30''$ S. Owing to cloudy weather the longitude of this point could not be obtained by astronomical observations, but was determined on the passage to Maty island, by means of bearings taken when both islands were in sight, to be in about longitude $143^{\circ} 6' 20''$ E.

The position of this island on the Chart has been amended accordingly.

Approximate position, Maty island, lat $1^{\circ} 45'$ S., long. $142^{\circ} 47'$ E.

This Notice affects the following Admiralty Charts:—*Pacific, south-west sheet*, No. 780; *Australia, northern portion*, No. 2759a; *north-east coast of New Guinea*, No. 2766; Also, *Pacific Islands, vol. I, 1900*, page 414.

CHINA SEA—GASPAR STRAIT.

Pure Joie reef—Reported position.

No. 47 (first publication).—With reference to Notice to Mariners No. 323, dated 26th August 1905, issued by this Office, the British Admiralty has given further notice (No. 1385 of 1905) that a repeated and careful search has been made for the Pure Joie reef in the position reported by the American S. S. *Mississippi* in May 1905, without any trace of its existence being found.

It is consequently considered that the *Mississippi* must have been deceived by the appearance of the water, but as a reef does doubtless exist in this vicinity, on which the ship *Pure Joie* remained aground for 24 hours, it is probable that the position given by that vessel is the most reliable.

Pure Joie reef has, therefore, been transferred on the Chart from the position given by the *Mississippi* to the situation originally assigned to it by the *Pure Joie*, viz., to a position from which Gaspar island summit bears S. $\frac{1}{2}$ E., distant $5\frac{1}{2}$ miles. It has been marked P. D.

Approximate position, lat. $2^{\circ} 19\frac{1}{2}'$ S., long. $107^{\circ} 4\frac{1}{2}'$ E.

Port Adelaide river—A Black buoy placed.

No. 49 (first publication).—The President of the Marine Board, Port Adelaide, has given notice (No. 32 of 1905) that a Black Buoy has been placed to mark the edge of the North Bank, at a position near where the inner Green Light Beacon formerly stood. As this Buoy will probably need to be moved slightly as the work of deepening the Outer Harbour progresses, it must be taken only as indicating the edge of the shoal, and vessels navigating that part of the channel should not approach it within 50 ft.

AFRICA, EAST COAST—PORT OF BARTHOLOMEU DIAS.

General Instructions.

No. 27 (second publication).—The following Notice to Mariners (No. 2 of 1906), issued by the Bombay Government, is republished for general information :—

The following information, dated September 1905, has been received from the Port Officer, Beira, through the Consul General for Portugal in British India :

The port is marked by beacons on land. These are six in number giving three courses by means of which the bar may be crossed and the harbour entered with absolute safety.

Bearings of the Beacons.

The bearing of the first pair of beacons Nos. 1 and 2, when in line, is S. 83° W., that of the second pair Nos. 3 and 4, S. 18° W., and of the third pair Nos. 5 and 6, is S. 10° 15' E.

Situation, form and colour of the Beacons.

Beacons Nos. 1 and 2 are on firm land covered by low mangroves, where the East margin of the bay and the port of Bartholomeu Dias properly speaking begins.

The bearing of these Beacons is tangent to the southern border of a dense and tall grove of pines (movinjes) which rises on the S.-E. extremity of the Movin-jes or Maconde island.

The grove is conspicuous to any one entering the port, since it rises from the sea, as a green clump of verdure, and is seen standing out alone before sighting the margin of the bay. It is a splendid landmark.

Beacon No. 1 is a quadrilateral tower surmounted by a triangular appendix, jutting out slightly over the sides of the tower. It is 20 metres high and 2 metres broad. The tower on the seaward side is painted in three vertical stripes, the one in the centre being black and those on the sides white. The triangular appendix is white with a black circle in the centre.

Beacon No. 2 is a triangular tower also ending in a triangular appendix, it is 25 metres high and 3.50 metres broad, and is alternately opened and closed in horizontal bands of 3 metres. The part which is covered is painted black so that the impression is produced of black bands alternating with others of light blue or gray.

The triangle is painted black with a white circle in the centre.

Beacon Nos. 3 and 4 are situated within the port, on the W. shore, on an unmistakable site locally called 'Chamadouro da Pedra.' On the border of this low and slightly undulating land, which is in general of a dark green tone, owing to the mangroves that cover it, there suddenly rises, forming a point, a yellowish white patch which looks like a big rock cut vertically with the shore. In the whole port of Bartholomew Dias this feature is unique and may be seen over the sands forming 'Macovano Point' soon after entering the first part of the channel: as marked by beacons Nos. 1 and 2.

Beacon No. 3 is in the shape of a column surmounted by a square, of which two opposite angles are fixed vertically on the prolongation of the axis of the column. It is black having in the centre another white square.

Beacon No. 4 is a tower exactly like beacon No. 2, but of smaller dimensions 18.50 m. high and 2 m. wide.

Beacons Nos. 5 and 6 are situated near 'Govuro Point' which is covered by a clump of tall pines, and here the commandant's house or residency stands. The house is not seen as it is surrounded by trees, but the point is clearly distinguished a little before leaving the second part of the channel, not only by the special form of the trees but also by the wooden jetty and by the flagstaff rising a few metres from it.

Beacon No. 5 is in the shape of a column, painted in three vertical bands, the centre one being black and the others white. It ends in a triangular appendix, painted white with a black circle in the centre. It is 11.75 m. high and 0m. 80 m. wide.

Beacon No. 6 is also a column, surmounted by a square, having areas painted black in the angles, and two concentric circles in the centre of the figure; the outer being black and the inner one white.

The column is painted in black and white horizontal bands. It is 16 m. high and 1 wide. The beacon is seen between two dense mangrove clumps, the one on the west growing up to the water's edge.

Currents.

The wide bay which precedes and serves as a sort of vestibule to the Port of Bartholomew Dias between Macovano Point on the S. and Matomene on the N. has both at flood and ebb tide a complex system of currents which must be taken into account when entering and leaving the port.

This is due to the fact that many rivers and rivulets besides the Govuro flow into the outer basin and the influence of the mouth of the Save is strongly felt. Thus the tide has to flow simultaneously on the S. after passing the N.-W. point of the peninsula, to enter the port and to the W. and N. to enter the canals and rivers near the north and centre of the basin. As the volume of water is greater in those two directions owing to the area to be covered being larger, the current at flood tide during the passage of the part of the channel marked by the beacons 1 and 2 is felt running N.-W. At ebb tide it is the contrary, the current running towards S.-E. and being stronger than during flood tide.

In the second part of the channel (marked by the beacons 3 and 4) the chief influence owing to its proximity, is that of the mouth of the Govuro, the flood tide runs W.-S.-W. deflecting to the S. inside the port. The ebb tide runs E.-N.-E. and is stronger than the flood tide.

In the third part of the channel (marked by beacons 5 and 6) the direction and strength of the tide is the same as in the preceding part, until the N.-W. point of the peninsula is reached; from that point the ebb and flow currents run parallel to the shore.

Instructions on entering and leaving the port.

From the above notes on the currents the following simple directions are deduced:—

In the first part of the channel.

With flood tide keep the beacons well in line.

With ebb tide let beacon No. 2 open out on the N. of beacon No. 1 until the S. side of the former is tangent to the N. face of the latter. Thus is corrected any setting of the vessel to the S. which helped by the strong current at ebb tide, might have thrown it on the bank which borders the land from Macovano Point to the extreme W. of the Govuro peninsula. The highest point of this bank is naturally marked by the line determined by the 'Chamadouro da Pedra' and by a group of three big trees which rise behind it, and are easily distinguished in the low green mangrove.

The direction of this line is S. 27° W. and after passing the point the beacons may follow even with strong ebb, until the vessel enters the second part of the channel.

In the second part of the channel.

With flood tide keep beacons 3 and 4 well in line. With ebb tide let No. 4 open a little on the W. of No. 3, to avoid the current carrying the ship toward the point of the tongue of sand which projects N.-N.-W. of the peninsula, which may generally be distinguished by the lighter colour of the water.

In the third part of the channel.

With flood tide keep beacons 5 and 6 in line.

With ebb tide let the beacon 6 open slightly to the W. of No. 5 until the point of the peninsula is passed, then follow the land and seek anchorage freely.

Floating mark.

To the W. of the third part of channel and very near it E. and W. of the small bend which forms the N.-W. corner of the right margin of the bay, there is a barrel painted red.

It marks a patch which is covered by $11\frac{1}{2}$ feet of water at low water spring tides. From this mark inwards parallel to the land the port has a depth of 6 fathoms to close to the shore, the bottom being sand and mud.

This mark is also of great service when leaving the third part of the channel and entering the port.

Anchorage.

It may be said in general that ships may safely anchor in two long lines of more than a mile in extent parallel to the shore, starting in the N.-W. corner and ending in the small bay on the S. point of which beacon No. 6 is placed.

At present, the usual anchorage is near the jetty referred to, on either side of it, and here the depth is 7 to 8 fathoms, with a bottom of mud or sand.

The port is protected from all winds, though those blowing over low lands, when very strong, cause a rough sea, but as there is no space for waves to form, on the E. owing to lying so close to the shore, and on the S.-W. owing to the succession of banks which guard the port in that direction, and as it is splendid holding ground, ships run no risk of dragging their anchors or securing their moorings.

Bearings.

The following are the bearings to enter the first channel when going into the port:—

Inhamabue Point (situated S.-E. and immediately following

Macovane Point) S. 25° W.

Macovane Point S. 39° $30'$ W.

Point E. of the Mueve island (situated E. of the high land of "Machangu" at the entrance of the "Save") N. 14° E.

The point determined by these bearings is in the extension of the line passing through beacons Nos. 1 and 2 and is almost on the E. edge of the bank at the entrance. The depth is 6 fathoms.

Lowest soundings in the channel.

The lowest soundings are to the E. of the outer bank, which runs uninterruptedly from Inhamabue Point to $1\frac{1}{2}$ miles beyond Mafomene Point. Three small patches were found at low water spring tides of $13\frac{1}{2}$ feet.

In the rest of the channel the depth varies from 18 to 35 feet at low water.

Establishment of the port.

4h. 50m.

Vertical rise of tides.

Spring rise	12 feet.
Neap tide rise	$7\frac{1}{2}$ feet.

Coordinates of Macovane Point.

Latitude 21° $9'$ $52''$ S.

Bankot buoys.

No. 20 (second publication).—The Bombay Government has given notice (No. 3 of 1906) that the force of the monsoons this year was not sufficient to dislodge the Bankot buoys from their moorings, which have remained intact in their places.

2. The channel at Bankote has shifted a little to the East of that marked by the present buoys, but as there will always be at least $7'$ $3''$ of water on the buoyed channel, it is proposed not to shift the buoys for the present so as to mark the proper channel.

No. 40 (second publication).—The British Admiralty has given notice (No. 1372 of 1905) that during a recent survey of the vicinity of the Minerva rock, Balayan bay, Luzon, no trace of this danger could be found, the depths in its assigned position varying from 175 to 200 fathoms.

This shoal was originally reported by the Master of the British ship *Minerva*, who stated that his vessel struck on it at 2 A.M. on the 10th September 1834. Its existence has always been considered doubtful, and as it has previously been searched for without effect, it has now been expunged from the Chart.

Durour island—Amended position.

No. 46 (second publication).—With reference to notice to Notice to Mariners No. 461, dated 25th November 1905, issued by this Office, the British Admiralty has given further notice (No. 1384 of 1905) that the position of Durour island, north-east coast of New Guinea, has been fixed by the officers of H.M.S. *Moice*.

The latitude of the eastern point of the island was determined by meridian altitude, taken on shore, to be 1° 27' 30" S. Owing to cloudy weather the longitude of this point could not be obtained by astronomical observations, but was determined on the passage to Maty island, by means of bearings taken when both islands were in sight, to be in about longitude 143° 6' 20" E.

The position of this island on the Chart has been amended accordingly.

Approximate position, Maty island, lat. 1° 45' S., long. 142° 47' E.

CHINA SEA—GASPAR STRAIT.

Pare Joie reef—Reported position.

No. 47 (second publication).—With reference to Notice to Mariners No. 323, dated 26th August 1905, issued by this Office, the British Admiralty has given further notice (No. 1385 of 1905) that a repeated and careful search has been made for the Pare Joie reef in the position reported by the American S. S. *Mississippi* in May 1905, without any trace of its existence being found.

It is consequently considered that the *Mississippi* must have been deceived by the appearance of the water, but as a reef does doubtless exist in this vicinity, on which the ship *Pare Joie* remained aground for 24 hours, it is probable that the position given by that vessel is the most reliable.

Pare Joie reef has, therefore, been transferred on the Chart from the position given by the *Mississippi* to the situation originally assigned to it by the *Pare Joie*, viz., to a position from which Gaspar island summit bears S. ½ E., distant 5½ miles. It has been marked P. D.

Approximate position, lat. 2° 19½' S., long. 107° 4½' E.

(Variation 2° Easterly in 1905.)

This Notice affects the following Admiralty Charts:—*Eastern Archipelago*, No. 941a; *Banka and Gaspar straits*, No. 2149; *Gaspar strait*, No. 2137: Also *China Sea Directory*, vol. I, 1896, page 461.

As this Buoy will probably need to be moved slightly as the work of deepening the Outer Harbour progresses, it must be taken only as indicating the edge of the shoal, and vessels navigating that part of the channel should not approach it within 50 ft.

NOTE.—This affects Admiralty Chart 2389B, 1750, and 1752.

AUSTRALIA, SOUTH—GULF ST. VINCENT.

AFRICA, EAST COAST—PORT OF BARTHOLOMEU DIAS.

General Instructions.

No. 59 (third publication).—The following Notice to Mariners (No. 2 of 1906), issued by the Bombay Government, is republished for general information:—

The following information, dated September 1905, has been received from the Port Officer, Beira, through the Consul General for Portugal in British India:

The port is marked by beacons on land. These are six in number giving three courses by means of which the bar may be crossed and the harbour entered with absolute safety.

Bearings of the Beacons.

The bearing of the first pair of beacons Nos. 1 and 2, when in line, is S. 83° W., that of the second pair Nos. 3 and 4, S. 18° W., and of the third pair Nos. 5 and 6, is S. 10° 15' E.

Situation, form and colour of the beacons.

Beacons Nos. 1 and 2 are on firm land covered by low mangroves, where the East margin of the bay and the port of Bartholomeu Dias properly speaking begins.

The bearing of these beacons is tangent to the southern border of a dense and tall grove of pines (movinjes) which rises on the S.-E. extremity of the Movin-jes or Maconde island.

The grove is conspicuous to any one entering the port, since it rises from the sea, as a green clump of verdure, and is seen standing out alone before sighting the margin of the bay. It is a splendid landmark.

Beacon No. 1 is a quadrilateral tower surmounted by a triangular appendix, jutting out slightly over the sides of the tower. It is 20 metres high and 2 metres broad. The tower on the seaward side is painted in three vertical stripes, the one in the centre being black and those on the sides white. The triangular appendix is white with a black circle in the centre.

Beacon No. 2 is a triangular tower also ending in a triangular appendix, it is 25 metres high and 3.50 metres broad, and is alternately opened and closed in horizontal bands of 3 metres. The part which is covered is painted black so that the impression is produced of black bands alternating with others of light blue or gray.

The triangle is painted black with a white circle in the centre.

Beacon Nos. 3 and 4 are situated within the port, on the W. shore, on an unmistakable site locally called 'Chamadouro da Pedra.' On the border of this low and slightly undulating land, which is in general of a dark green tone, owing to the mangroves that cover it, there suddenly rises, forming a point, a yellowish white patch which looks like a big rock out vertically with the shore. In the whole port of Bartholomeu Dias this feature is unique and may be seen over the sands forming 'Macovano Point' soon after entering the first part of the channel: as marked by beacons Nos. 1 and 2.

Beacon No. 3 is in the shape of a column surmounted by a square, of which two opposite angles are fixed vertically on the prolongation of the axis of the column. It is black having in the centre another white square.

Beacon No. 4 is a tower exactly like beacon No. 2, but of smaller dimensions 18.50 m. high and 2 m. wide.

Beacons Nos. 5 and 6 are situated near 'Govuro Point' which is covered by a clump of tall pines, and here the commandant's house or residency stands. The house is not seen as it is surrounded by trees, but the point is clearly distinguished a little before leaving the second part of the channel, not only by the special form of the trees but also by the wooden jetty and by the flagstaff rising a few metres from it.

Beacon No. 5 is in the shape of a column, painted in three vertical bands, the centre one being black and the others white. It ends in a triangular appendix, painted white with a black circle in the centre. It is 11.75 m. high and 0m. 80 m. wide.

Beacon No. 6 is also a column, surmounted by a square, having arcs painted black in the angles, and two concentric circles in the centre of the figure; the outer being black and the inner one white.

The column is painted in black and white horizontal bands. It is 16 m. high and 1 wide. The beacon is seen between two dense mangrove clumps, the one on the west growing up to the water's edge.

Currents.

The wide bay which precedes and serves as a sort of vestibule to the Port of Bartholomeu Dias between Macovano Point on the S. and Macomede on the N. has both at flood and ebb tide a complex system of currents which must be taken into account when entering and leaving the port.

This is due to the fact that many rivers and rivulets besides the Govuro flow into the outer basin and the influence of the mouth of the Save is strongly felt. Thus the tide has to flow simultaneously on the S. after passing the N.-W. point of the peninsula, to enter the port and to the W. and N. to enter the canals and rivers near the north and centre of the basin. As the volume of water is greater in those two directions owing to the area to be covered being larger, the current at flood tide during the passage of the part of the channel marked by the beacons 1 and 2 is felt running N.-W. At ebb tide it is the contrary, the current running towards S.-E. and being stronger than during flood tide.

In the second part of the channel (marked by the beacons 3 and 4) the chief influence owing to its proximity, is that of the mouth of the Govuro, the flood tide runs V.-S.-W. deflecting to the S. inside the port. The ebb tide runs E.-N.-E. and is stronger than the flood tide.

In the third part of the channel (marked by beacons 5 and 6) the direction and strength of the tide is the same as in the preceding part, until the N.-W. point of the peninsula is reached; from that point the ebb and flow currents run parallel to the shore.

Instructions on entering and leaving the port.

From the above notes on the currents the following simple directions are deduced:—

In the first part of the channel.

With flood tide keep the beacons well in line.

With ebb tide let beacon No. 2 open out on the N. of beacon No. 1 until the S. side of the former is tangent to the N. face of the latter. Thus is corrected any setting of the vessel to the S. which helped by the strong current at ebb tide, might have thrown it on the bank which borders the land from Macovane Point to the extreme W. of the Govuro peninsula. The highest point of this bank is naturally marked by the line determined by the 'Ohamadouro da Pedra' and by a group of three big trees which rise behind it, and are easily distinguished in the low green mangrove.

The direction of this line is S. 27° W. and after passing the point the beacons may follow even with strong ebbs, until the vessel enters the second part of the channel.

In the second part of the channel.

With flood tide keep beacons 3 and 4 well in line. With ebb tide let No. 4 open a little on the W. of No. 3, to avoid the current carrying the ship toward the point of the tongue of sand which projects N.-N.-W. of the peninsula, which may generally be distinguished by the lighter colour of the water.

In the third part of the channel.

With flood tide keep beacons 5 and 6 in line.

With ebb tide let the beacon 6 open slightly to the W. of No. 5 until the point of the peninsula is passed, then follow the land and seek anchorage freely.

Floating mark.

To the W. of the third part of channel and very near it E. and W. of the small bond which forms the N.-W. corner of the right margin of the bay, there is a barrel painted red.

It marks a patch which is covered by 11½ feet of water at low water spring tides. From this mark inwards parallel to the land the port has a depth of 6 fathoms to close to the shore, the bottom being sand and mud.

This mark is also of great service when leaving the third part of the channel and entering the port.

Anchorage.

It may be said in general that ships may safely anchor in two long lines of more than a mile in extent parallel to the shore, starting in the N.-W. corner and ending in the small bay on the S. point of which beacon No. 6 is placed.

At present, the usual anchorage is near the jetty referred to, on either side of it, and here the depth is 7 to 8 fathoms, with a bottom of mud or sand.

The port is protected from all winds, though those blowing over low lands, when very strong, cause a rough sea, but as there is no space for waves to form, on the E. owing to lying so close to the shore, and on the S.-W. owing to the succession of banks which guard the port in that direction, and as it is splendid holding ground, ships run no risk of dragging their anchors or wearing their moorings.

Bearings.

The following are the bearings to enter the first channel when going into the port:—

Inhamabue Point (situated S.-E. and immediately following				
Macovane Point)	S. 25° W.
Macovane Point	S. 39° 30' W.

Point E. of the Muve island (situated E. of the high land of "Machanga" at the entrance of the "Save") N. 14 E.

The point determined by these bearings is in the extension of the line passing through beacons Nos. 1 and 2 and is almost on the E. edge of the bank at the entrance. The depth is 6 fathoms.

Lowest soundings in the channel.

The lowest soundings are to the E. of the outer bank, which runs uninterruptedly from Inhamabue Point to 1½ miles beyond Mafamene Point. Three small patches were found at low water spring tides of 13½ feet.

In the rest of the channel the depth varies from 18 to 35 feet at low water.

Establishment of the port.

4h. 50m.

Vertical rise of tides.

Spring rise	12 feet.
Neap tide rise	7½ feet.

No. 45 (third publication).—The British Admiralty has given notice (No. 1381 of 1905) that the red fixed light formerly shown from the lighthouse on Tubud point, Dapitan bay, has been discontinued.

Approximate position, lat. 8° 42½' N., long. 123° 21' E.

This Notice affects the following Admiralty Charts:—Philippine islands, No. 943; Sulu and Mindoro sea, eastern part, No. 2578; Dapitan bay on sheet, No. 954: *Also, List of Lights, Part VI, 1905, No. 586, and Eastern Archipelago, Part I, 1902, page 320.*

PACIFIC OCEAN—NEW GUINEA, NORTH-EAST COAST.

Durour island—Amended position.

No. 46 (*third publication*).—With reference to notice to Mariners No. 461, dated 25th November 1905, issued by this Office, the British Admiralty has given further notice (No. 1384 of 1905) that the position of Durour island, north-east coast of New Guinea, has been fixed by the officers of H.I.M.S. *Möve*.

The latitude of the eastern point of the island was determined by meridian altitude, taken on shore, to be $1^{\circ} 27' 30''$ S. Owing to cloudy weather the longitude of this point could not be obtained by astronomical observations, but was determined on the passage to Maty island, by means of bearings taken when both islands were in sight, to be in about longitude $143^{\circ} 6' 20''$ E.

The position of this island on the Chart has been amended accordingly.

Approximate position, Maty island, lat. $1^{\circ} 45'$ S., long. $142^{\circ} 47'$ E.

This Notice affects the following Admiralty Charts:—*Pacific, south-west sheet, No. 780; Australia, northern portion, No. 2759a; north-east coast of New Guinea, No. 2766; Also, Pacific Islands, vol. I, 1900, page 414.*

CHINA SEA—GASPAR STRAIT.

Pare Joie reef—Reported position.

No. 47 (*third publication*).—With reference to Notice to Mariners No. 323, dated 26th August 1905, issued by this Office, the British Admiralty has given further notice (No. 1385 of 1905) that a repeated and careful search has been made for the Pare Joie reef in the position reported by the American S. S. *Mississippi* in May 1905, without any trace of its existence being found.

It is consequently considered that the *Mississippi* must have been deceived by the appearance of the water, but as a reef does doubtless exist in this vicinity, on which the ship *Pare Joie* remained aground for 24 hours, it is probable that the position given by that vessel is the most reliable.

Pare Joie reef has, therefore, been transferred on the Chart from the position given by the *Mississippi* to the situation originally assigned to it by the *Pare Joie*, viz., to a position from which Gaspar island summit bears S. $\frac{1}{2}$ E., distant $5\frac{1}{2}$ miles. It has been marked P. D.

Approximate position, lat. $2^{\circ} 19\frac{1}{2}'$ S., long. $107^{\circ} 4\frac{1}{2}'$ E.

AUSTRALIA, SOUTH—GULF ST. VINCENT.

Port Adelaide river—A Black buoy placed.

No. 49 (*third publication*).—The President of the Marine Board, Port Adelaide, has given notice (No. 32 of 1905) that a Black Buoy has been placed to mark the edge of the North Bank, at a position near where the inner Green Light Beacon formerly stood. As this

Buoy will probably need to be moved slightly as the work of deepening the Outer Harbour progresses, it must be taken only as indicating the edge of the shoal, and vessels navigating that part of the channel should not approach it within 50 ft.

NOTE.—This affects Admiralty Chart 2389s, 1750, and 1752.

- (a) The wreck of the ship *Highfields*, which sank in a depth of about 10 fathoms, at a distance of 8 cables N. 40° E. from the end of the north breakwater, is not regarded by the local pilots as dangerous to navigation, as it is supposed to have become embedded in the sand.

Approximate position, lat. 33° 53' S., long. 18° 25½' E.

With reference to Notice to Mariners No. 365 of 1904:—

AUSTRALIA, SOUTH—GULF OF ST. VINCENT.

Port Adelaide river—Extra Beacons placed—Amended Sailing Directions.

No. 243 (first publication).—With reference to Notice to Mariners No. 62, dated 10th February 1906, issued by this office, the Secretary, Marine Board, Port Adelaide, has given further notice (No. 11 of 1906) that eight extra beacons have been placed on the north and east side of the cutting. The beacons are painted black and the lanterns green, from which a green light showing towards the cutting is exhibited; a white light is also exhibited from the back of each lantern showing towards the shore.

All the green light beacons are numbered from the first or seaward beacon with the letter "G" added as follows:—No. 0G, being outside beacon; No. 1G, near the reflecting beacon; No. 2G, opposite the old boat channel. This light indicates the turning point from No. 2 (red) lead towards No. 3. All the others, that is, Nos. 3G to 9G, both inclusive, are placed opposite the corresponding numbers of the white light beacons on the other side of the cutting.

All the single light beacons are placed about 15 feet back from the cutting, and painted red to starboard and black to port. The lights are white to starboard and green to port from seaward.

The red light on the pile beacon south of No. 3 being no longer required will, on and after the 1st June 1906, be discontinued.

In consequence of the above alterations the sailing directions have been amended to read as follows:—

Sailing Directions.

By night.—In approaching the anchorage, vessels of deep draught should not bring the white light on the old structure to bear north of N. E. by E. in order to avoid the four-fathom patch, which bears N. W. half N. from the light on Wonga Shoal; then get No. 1 lead (which consists of two red lights vertical 10 feet apart, and two white lights vertical 11 feet 9 inches apart) in line; keep these in line passing between the occulting light on the red buoy and the outer green light on the north bank, also between the other green lights on the north bank and the white lights on the revetment mound.

Steer on the same line until the two red lights of No. 2 lead are coming on; then steer with them in line until abreast of No. 2G beacon; then direct the course to pass between No. 3 and No. 3G beacons; and so on from beacon to beacon round the point until No. 9 is reached. From a safe distance off No. 9 the lights of No. 10 lead will be seen; keep them in line until the red light is about a quarter of a point open to the right of the white light of No. 11 lead; then gradually alter the course to bring the lights of No. 11 lead in line; keep them in line (a sharp look out being kept for the mooring buoys on the starboard hand) until the lights of No. 12 lead are seen coming into line; proceed as before by altering the course before the lights are on with each other. The same applies in the change from No. 12 to No. 13 lead. When the lights on the wharves are seen opening out off Luff Point, alter the course so as to round the point at a safe distance, and then up the centre of the channel, looking out for the mooring buoys on the starboard hand.

In going outwards the directions are just the opposite to those given for those coming inwards; but in such case, in changing from one lead to another, the course should be gradually altered when abreast of the low (red) beacon of each lead, excepting No. 2 lead. In this case, when abreast of No. 3 beacon, gradually alter the course to a safe distance off No. 2G until the two red lights of No. 2 lead are in line, then proceed outwards with No. 2 lead in line.

By day.—The directions by day are the same as by night, merely substituting the beacons for the lights.

This affects Admiralty Charts 2389A and B, 1750 and 1752.

During the progress of the work at the Light's Passage Harbour Works, masters of vessels exempt from pilotage may, if they so desire, avail themselves of the services of a pilot to assist them in passing such works, either in or out, at one-half the usual rates.

If the usual exemption flag is not hoisted, it will be taken as a signal that a pilot is required. At night if a pilot is required the usual signal for a pilot should be shown.

N.B.—Owing to the nature of the work in progress, this notice may require to be amended from time to time, and therefore should be treated as tentative only.

Port Adelaide river—Extra Beacons placed—Amended Sailing Directions.

No. 243 (*third publication*).—With reference to Notice to Mariners No. 62, dated 10th February 1906, issued by this office, the Secretary, Marine Board, Port Adelaide, is given further notice (No. 11 of 1906) that eight extra beacons have been placed on the north and east side of the cutting. The beacons are painted black and the lanterns green, from which a green light showing towards the cutting is exhibited; a white light is also exhibited from the back of each lantern showing towards the shore.

All the green light beacons are numbered from the first or seaward beacon with the letter "G" added as follows:—No. 0G, being outside beacon; No. 1G, near the reflecting beacon; No. 2G, opposite the old boat channel. This light indicates the turning point from No. 2 (red) lead towards No. 3. All the others, that is, Nos. 3G to 9G, both inclusive, are placed opposite the corresponding numbers of the white light beacons on the other side of the cutting.

All the single light beacons are placed about 15 feet back from the cutting, and painted red to starboard and black to port. The lights are white to starboard and green to port from seaward.

The red light on the pile beacon south of No. 3 being no longer required will, on and after the 1st June 1906, be discontinued.

In consequence of the above alterations the sailing directions have been amended to read as follows:—

Sailing Directions.

By night.—In approaching the anchorage, vessels of deep draught should not bring the white light on the old structure to bear north of N. E. by E. in order to avoid the four-fathom patch, which bears N. W. half N. from the light on Wonga Shoal; when get No. 1 lead (which consists of two red lights vertical 19 feet apart, and two white lights vertical 11 feet 9 inches apart) in line; keep these in line passing between the occulting light on the red buoy and the outer green light on the north bank, also between the other green lights on the north bank and the white lights on the revetment mound.

Steer on the same line until the two red lights of No. 2 lead are coming on; then steer with them in line until abreast of No. 2G beacon; then direct the course to pass between No. 3 and No. 4 beacons; and so on from beacon to beacon round the point until No. 9 is reached. From a safe distance off No. 9 the lights of No. 10 lead will be seen; keep them in line until the red light is about a quarter of a point open to the right of the white light of No. 11 lead; then gradually alter the course to bring the lights of No. 11 lead in line; keep them in line (a sharp look out being kept for the mooring buoys on the starboard hand) until the lights of No. 12 lead are seen coming into line; proceed as before by altering the course before the lights are on with each other. The same applies in the change from No. 12 to No. 13 lead. When the lights on the wharves are seen opening out off Luff Point, alter the course so as to round the point at a safe distance, and then up the centre of the channel, looking out for the mooring buoys on the starboard hand.

In going outwards the directions are just the opposite to those given for those coming inwards; but in such case, in changing from one lead to another, the course should be gradually altered when abreast of the low (red) beacon of each lead, excepting No. 2 lead. In this case, when abreast of No. 3 beacon, gradually alter the course to a safe distance off No. 2G until the two red lights of No. 2 lead are in line, then proceed outwards with No. 2 lead in line.

By day.—The directions by day are the same as by night, merely substituting the beacons for the lights.

This affects Admiralty Charts 2389A and B, 1750 and 1752.

During the progress of the work at the Light's Passage Harbour Works, masters of vessels exempt from pilotage may, if they so desire, avail themselves of the services of a pilot to assist them in passing such works, either in or out, at one-half the usual rates.

If the usual exemption flag is not hoisted, it will be taken as a signal that a pilot is required. At night if a pilot is required the usual signal for a pilot should be shown.

*N.B.—Owing to the nature of the work in progress, this notice may require to be amended from time to time, and therefore should be treated as tentative only.

Cautionary Notices.

No. 274 (*first publication*).—The following Notice to Mariners, issued by the British Admiralty (No. 682 of 1906), is republished for general information:—

As the cautionary Notices respecting fog-signals given in the Introductory notes in all copies of the Admiralty Lists of Lights do not appear to be quite understood, more especially the paragraphs pointing out that such signals are heard at greatly varying distances, and that there are occasionally areas around a fog-signal station in which the fog-signal is wholly inaudible, it is thought desirable to point out to seamen that not infrequently a fog-signal, which may be heard under favourable circumstances from a distance of 10 miles or upwards, is inaudible when only 2 or 3 miles off it, and that no surprise should be felt if, from a vessel, either at anchor, or underway, not far from a fog-signal station, the sound of the fog-signal is not heard on board.

FOG SIGNALS—ADMIRALTY LISTS OF LIGHTS.

Cautionary Notices.

No. 274 (second publication).—The following Notice to Mariners, issued by the British Admiralty (No. 682 of 1906), is republished for general information:—

As the cautionary Notices respecting fog-signals given in the Introductory notes in all copies of the Admiralty Lists of Lights do not appear to be quite understood, more especially the paragraphs pointing out that such signals are heard at greatly varying distances, and that there are occasionally areas around a fog-signal station in which the fog-signal is wholly inaudible, it is thought desirable to point out to seamen that not infrequently a fog-signal which may be heard under favourable circumstances from a distance of 10 miles or upwards is inaudible when only 2 or 3 miles off it, and that no surprise should be felt if, from a vessel, either at anchor, or underway, not far from a fog-signal station, the sound of the fog signal is not heard on board.

Caution—Vladivostock approach—Submarine mines.

No. 288 (second publication).—The British Admiralty has given notice (No. 737 of 1906) that submarine mines were laid during the late war between Russia and Japan by both belligerents, extending apparently as far southward in Ussuri bay as a line joining Askold island to the Rimakago Korsakofa islands, a distance of about 40 miles. Damage has been caused to several steam-vessels approaching Vladivostock from the south-eastward by coming in contact with either fixed or drifting mines.

The Russian Government has given Notice, dated 6th June 1906, that a temporary *white flash light* was established on 4th May last, in a light-house in course of construction on Cape Gamova, to assist in the navigation of the channel to Vladivostock by its western approach through Amur bay, which channel should be used until notice is issued that the eastern approach is free from danger.

Vessels, therefore, bound to Vladivostock should make cape Gamova. According to a Berlin Notice, the route thence to be followed is to pass westward of Rimakago Korsakofa, Stenin, and Tsivolko, with Popova and Kozakevicha close aboard, to the Eastern Bosphorus.

A fog siren would be established, probably in June, at Gamova light-house.

FOG SIGNALS—ADMIRALTY LISTS OF LIGHTS.

Cautionary Notices.

No. 272 (third publication).—The following Notice to Mariners, issued by the British Admiralty (No. 682 of 1906), is republished for general information:—

As the Cautionary Notices respecting fog-signals given in the Introductory notes in all copies of the Admiralty Lists of Lights do not appear to be quite understood, more especially the paragraphs pointing out that such signals are heard at greatly varying distances, and that there are occasionally areas around a fog-signal station in which the fog-signal is wholly inaudible, it is thought desirable to point out to seamen that not infrequently a fog-signal, which may be heard under favourable circumstances from a distance of 10 miles or upwards, is inaudible when only 2 or 3 miles off it, and that no surprise should be felt if, from a vessel, either at anchor, or underway, not far from a fog-signal station, the sound of the fog-signal is not heard on board.

Caution—Vladivostock approach—Submarine mines.

No. 288 (third publication).—The British Admiralty has given notice (No. 737 of 1906) that submarine mines were laid during the late war between Russia and Japan by both belligerents, extending apparently as far southward in Ussuri bay as a line joining Askold island to the Rimskago Korsakofa islands, a distance of about 40 miles. Damage has been caused to several steam-vessels approaching Vladivostock from the south-eastward by coming in contact with either fixed or drifting mines.

The Russian Government has given Notice, dated 6th June 1906, that a temporary *white fixed* light was established on 4th May last, in a light-house in course of construction on Cape Gamova, to assist in the navigation of the channel to Vladivostock by its western approach through Amur bay, which channel should be used until notice is issued that the eastern approach is free from danger.

● Vessels, therefore, bound to Vladivostock should make cape Gamova. According to a Berlin Notice, the route thence to be followed is to pass westward of Rimskago Korsakofa, Stenin, and Tsivolko, with Popova and Kozakevich close aboard, to the Eastern Bosphorus.

A fog siren would be established, probably in June, at Gamova light-house.

Port Adelaide—Tidal Signals amended.

No. 315 (first publication).—The British Admiralty has given notice (No. 137 of 1906) that, on and after 6th January 1906, the tidal signals made at the Pilot signal station, Semaphore jetty, Port Adelaide, would be altered to show the depth of water above or below the depths shown on the Chart as follows:—

One ball at the south yardarm indicates	...	1 foot.
" " " north " "	...	2 feet.
Two balls at the south yardarm indicates	...	3 "
" " " north " "	...	4 "
One ball at the masthead indicates	...	5 "
One ball at the masthead and one ball at south yardarm indicates	...	6 "
One ball at the masthead and one ball at north yardarm indicates	...	7 "
One ball at the masthead and two balls at south yardarm indicates	...	8 "
One ball at the masthead and two balls at north yardarm indicates	...	9 "
Two balls at the masthead indicates	...	10 "
Two balls at the masthead and one ball at south yardarm indicates	...	11 "
Two balls at the masthead and one ball at north yardarm indicates	...	12 "
A cone point upwards at either yardarm indicates an additional	...	3 inch
A diamond at either yardarm indicates an additional	...	6 "
A cone point downwards at either yardarm indicates an additional	...	9 "

At low water a drum will be hoisted at the masthead. Should the water be below the level of low water, the above symbols are used, but the drum is kept up to show that the depth given must then be subtracted from the depths shown on the chart.

Example.—Two balls at the south yardarm and a cone point upwards at the north yardarm shows that 3 feet 3 inches will have to be added to the sounding on the chart to give the depth at that time. One ball at the masthead under a drum indicates that 5 feet will have to be subtracted from the sounding on the chart to give the required depth.

Port Adelaide—Tidal Signals amended.

No. 315 (second publication).—The British Admiralty has given notice (No. 137 of 1906) that, on and after 6th January 1906, the tidal signals made at the Pilot signal station, Semaphore jetty, Port Adelaide, would be altered to show the depth of water above or below the depths shown on the Chart as follows:—

One ball at the south yardarm indicates	1 foot.
" " north " "	2 feet.
Two balls at the south yardarm indicates	3 "
" " north " "	4 "
One ball at the masthead indicates	5 "
One ball at the masthead and one ball at south yardarm indicates	6 "
One ball at the masthead and one ball at north yardarm indicates	7 "
One ball at the masthead and two balls at south yardarm indicates	8 "
One ball at the masthead and two balls at north yardarm indicates	9 "
Two balls at the masthead indicates	10 "
Two balls at the masthead and one ball at south yardarm indicates	11 "
Two balls at the masthead and one ball at north yardarm indicates	12 "
A cone point upwards at either yardarm indicates an additional	3 inches.
A diamond at either yardarm indicates an additional	6 "
A cone point downwards at either yardarm indicates an additional	9 "

At low water a drum will be hoisted at the masthead. Should the water be below the level of low water, the above symbols are used, but the drum is kept up to show that the depth given must then be subtracted from the depth shown on the chart.

Example.—Two balls at the south yardarm and a cone point upwards at the north yardarm shows that 3 feet 3 inches will have to be added to the sounding on the chart to give the depth at that time. One ball at the masthead under a drum indicates that 5 feet will have to be subtracted from the sounding on the chart to give the required depth.

" " north " "	...	2 feet.
Two balls at the south yardarm indicates	...	3 "
" " north " "	...	4 "
One ball at the masthead indicates	...	5 "
One ball at the masthead and one ball at south yardarm indicates	...	6 "
One ball at the masthead and one ball at north yardarm indicates	...	7 "

A cone point downwards at either yardarm indicates an additional	...	9 "

At low water a drum will be hoisted at the masthead. Should the water be below the level of low water, the above symbols are used, but the drum is kept up to show that the depth given must then be subtracted from the depths shown on the chart.

Example s.—Two balls at the south yardarm and a cone point upwards at the north yardarm shows that 3 feet 3 inches will have to be added to the sounding on the chart to give the depth at that time. One ball at the masthead under a drum indicates that 5 feet will have to be subtracted from the sounding on the chart to give the required depth.

NOTICES TO MARINERS.

The following Notices are published for general information.

CALCUTTA, the 25th October 1906.

W. A. INGLIS,
Secy. to the Govt. of Bengal.

AUSTRALIA, NORTH COAST—MELVILLE ISLAND AND DUNDAS STRAIT.

Parry Shoal—Depth of water incorrectly shown on chart.

No. 409 (first publication).—The President of the Marine Board, Port Adelaide, has given notice (No. 15 of 1906) that the Master of the S.S. *Empire* reports that when passing Parry Shoal at 6 p.m. on the 6th May 1906, at a distance of half-a-mile, he noticed a very heavy break on the five-fathom Patch, marked on the Chart—

Lat. $11^{\circ} 10' S$
Long. $129^{\circ} 40' E$.

From this the Master presumed that the depth of water as shown on the Chart is incorrect.

Mariners are warned to avoid the vicinity.

AUSTRALIA, SOUTH COAST—BACKSTAIRS PASSAGE.

Yatala Shoal—Buoy with spherical top placed.

No. 410 (first publication).—The President, Marine Board, Port Adelaide, has given notice (No. 16 of 1906) that, on or about 24th September, a buoy with a Spherical Top surmounted by a Half Globe, round side up, and painted red and white (horizontal bands), will be placed in five (5) fathoms L.W.S. on the N.W. side of the Yatala Shoal.

Second Edition of Chart 8389B.

AUSTRALIA, SOUTH COAST—GULF OF ST. VINCENT.

Port Adelaide river—Additional new beacons placed—Amended sailing directions.

No. 412 (first publication).—The President, Marine Board, Port Adelaide, has given notice (No. 18 of 1906) that in accordance with previous notices, eight extra Beacons have been placed on the north and east side of the cutting. The Beacons are painted black, and the lanterns green, from which a green light showing towards the cutting is exhibited; a white light is also exhibited from the back of each lantern showing towards the shore.

All the green light Beacons are numbered from the first or seaward Beacon with the letter "G" added, as follows:—No. 0G being outside Beacon; No. 1G, near the reflecting Beacon; No. 2G, opposite the old boat channel. This light indicates the turning point from No. 2 (red) lead towards No. 3. All the others, that is, Nos. 3G to 9G, both inclusive, are placed opposite the corresponding numbers of the white light Beacons on the other side of the cutting.

All the single light Beacons are placed about 15 feet back from the cutting, and painted red to starboard and black to port. The lights are white to starboard and green to port from seaward.

The red light on the pile Beacon south of No. 3 being no longer required has been discontinued.

In consequence of the above alterations the sailing directions have been amended to read as follows:—

Sailing directions.

By Night.—In approaching the Anchorage, vessels of deep draught should not bring the white light on the old structure to bear north of N.E. by E. in order to avoid the four-fathom patch, which bears N.W. half N. from the light on Wonga Shoal; then get No. 1 lead (which consists of two red lights vertical 10 feet apart, and two white lights vertical 11 feet 9 inches apart) in line; keep those in line passing between the occulting light on the red buoy and the outer green light on the north bank, also between the other green lights on the north bank and the white lights on the revetment mound.

Steer on the same line until the two red lights of No. 2 lead are coming on; then steer with them in line until abreast of No. 2G Beacon; then direct the course to pass between No. 3 and No. 3G Beacons; and so on from Beacon to Beacon round the point until No. 9 is reached. From a safe distance off No. 9 the lights of No. 10 lead will be seen; keep them in line until the red light is about a quarter of a point open to the right of the white light of No. 11 lead; then gradually alter the course to bring the lights of No. 11 lead in line; keep them in line (a sharp look-out being kept for the mooring buoys on the starboard hand) until the lights of No. 12 lead are seen coming into line; proceed as before by altering the course before the lights are on with each other. The same applies in the change from No. 12 to No. 13 lead. When the lights on the wharves are seen opening out off Luff Point, alter the course so as to round the point at a safe distance, and then up the centre of the channel, looking out for the mooring buoys on the starboard hand.

In going outwards the directions are just the opposite to those given for coming inwards; but in such case, in changing from one lead to another, the course should be gradually altered when abreast of the low (red) Beacon of each lead, except No. 2 lead. In this case, when abreast of No. 3 Beacon, gradually alter the course to a safe distance off No. 2G until the two red lights of No. 2 lead are in line, then proceed outwards with No. 2 lead in line.

By Day.—The directions by day are the same as by night, merely substituting the Beacons for the Lights.

This affects Admiralty Charts 2389A and B, 1750 and 1752.

During the progress of the work at the Light's Passage Harbour Works, masters of vessels exempt from pilotage may, if they so desire, avail themselves of the services of a pilot to assist them in passing such works, either in or out, at one-half the usual rates.

If the usual exemption flag is not hoisted it will be taken as a signal that a pilot is required. At night if a pilot is required the usual signal for a pilot should be shown.

N.B.—Owing to the nature of the work in progress, this notice may require to be amended from time to time, and therefore should be treated as tentative only.

AUSTRALIA, SOUTH COAST—SPENCER GULF.

AUSTRALIA, SOUTH COAST—GULF OF ST. VINCENT.

Port Adelaide river—Additional new beacons placed—Amended sailing directions.

No. 412 (second publication).—The President, Marine Board, Port Adelaide, has given notice (No. 18 of 1906) that in accordance with previous notices, eight extra Beacons have been placed on the north and east side of the cutting. The Beacons are painted black, and the lanterns green, from which a green light showing towards the cutting is exhibited; a white light is also exhibited from the back of each lantern showing towards the shore.

All the green light Beacons are numbered from the first or seaward Beacon with the letter "G" added, as follows:—No. 0G being outside Beacon; No. 1G, near the reflecting Beacon; No. 2G, opposite the old boat channel. This light indicates the turning point from No. 2 (red) lead towards No. 3. All the others, that is, Nos. 3G to 9G, both inclusive, are placed opposite the corresponding numbers of the white light Beacons on the other side of the cutting.

All the single light Beacons are placed about 15 feet back from the cutting, and painted red to starboard and black to port. The lights are white to starboard and green to port from seaward.

The red light on the pile Beacon south of No. 3 being no longer required has been discontinued.

In consequence of the above alterations the sailing directions have been amended to read as follows:—

Sailing directions.

By Night.—In approaching the Anchorage, vessels of deep draught should not bring the white light on the old structure to bear north of N.E. by E. in order to avoid the four-fathom patch, which bears N.W. half N. from the light on Wonga Shoal; then get No. 1 lead (which consists of two red lights vertical 10 feet apart, and two white lights vertical 11 feet 9 inches apart) in line; keep these in line passing between the occulting light on the red buoy and the outer green light on the north bank, also between the other green lights on the north bank and the white lights on the revetment mound.

Steer on the same line until the two red lights of No. 2 lead are coming on; then steer with them in line until abreast of No. 2G Beacon; then direct the course to pass between No. 3 and No. 3G Beacons; and so on from Beacon to Beacon round the point until No. 9 is reached. From a safe distance off No. 9 the lights of No. 10 lead will be seen; keep them in line until the red light is about a quarter of a point open to the right of the white light of No. 11 lead; then gradually alter the course to bring the lights of No. 11 lead in line; keep them in line (a sharp look-out being kept for the mooring buoys on the starboard hand) until the lights of No. 12 lead are seen coming into line; proceed as before by altering the course before the lights are on with each other. The same applies in the change from No. 12 to No. 13 lead. When the lights on the wharves are seen opening out off Luff Point, alter the course so as to round the point at a safe distance, and then up the centre of the channel, looking out for the mooring buoys on the starboard hand.

In going outwards the directions are just the opposite to those for coming inwards; but in such case, in changing from one lead to another, the course should be gradually altered when abreast of the low (red) Beacon of each lead, except No. 2 lead. In this case, when abreast of No. 3 Beacon, gradually alter the course to a safe distance off No. 2G until the two red lights of No. 2 lead are in line, then proceed outwards with No. 2 lead in line.

By Day.—The directions ~~by day~~ are the same as by night, merely substituting the Beacons for the Lights.

This affects Admiralty Charts 2389 A and B, 1750 and 1752.

During the progress of the work at the Light's Passage Harbour Works, masters of vessels exempt from pilotage may, if they so desire, avail themselves of the services of a pilot to assist them in passing such works, either in or out, at one-half the usual rates.

If the usual exemption flag is not hoisted it will be taken as a signal that a pilot is required. At night if a pilot is required the usual signal for a pilot should be shown.

N.B.—Owing to the nature of the work in progress, this notice may require to be amended from time to time, and therefore should be treated as tentative only.

AUSTRALIA, SOUTH COAST—SPENCER GULF.

Cornry Point light—Alteration in character.

Instead of the Light being obscured over the Webb Rock and thence inshore as at present, a Red Sector will be shown over this Arc, i.e., between the bearings of N.E. $\frac{1}{2}$ E and N.E. by N. $\frac{1}{2}$ N., where it is shut in by the first point to the Southward of the Light-house.

The Red Sector will be visible for 14 miles, the full range of the Light.

The Beacons are painted black, and the lanterns green, from which a green light showing towards the cutting is exhibited; a white light is also exhibited from the back of each lantern showing towards the shore.

All the green light Beacons are numbered from the first or seaward Beacon with the letter "G" added, as follows:—No. 0G being outside Beacon; No. 1G, near the reflecting Beacon; No. 2G, opposite the old boat channel. This light indicates the turning point from No. 2 (red) lead towards No. 3. All the others, that is, Nos. 3G to 9G, both inclusive, are placed opposite the corresponding numbers of the white light Beacons on the other side of the cutting.

All the single light Beacons are placed about 15 feet back from the cutting, and painted red to starboard and black to port. The lights are white to starboard and green to port from seaward.

The red light on the pile Beacon south of No. 3 being no longer required has been discontinued.

In consequence of the above alterations the sailing directions have been amended to read as follows:—

Sailing directions.

By Night.—In approaching the Anchorage, vessels of deep draught should not bring the white light on the old structure to bear north of N.E. by E. in order to avoid the four-fathom patch, which bears N.W. half N. from the light on Wonga Shoal; then get No. 1 lead (which consists of two red lights vertical 10 feet apart, and two white lights vertical 11 feet 9 inches apart) in line; keep these in line passing between the occulting light on the red buoy and the outer green light on the north bank, also between the other green lights on the north bank and the white lights on the revetment mound.

Steer on the same line until the two red lights of No. 2 lead are coming on; then steer with them in line until abreast of No. 2G Beacon; then direct the course to pass between No. 3 and No. 3G Beacons; and so on from Beacon to Beacon round the point until No. 9 is reached. From a safe distance off No. 9 the lights of No. 10 lead will be seen; keep them in line until the red light is about a quarter of a point open to the right of the white light of No. 11 lead; then gradually alter the course to bring the lights of No. 11 lead in line; keep them in line (a sharp look-out being kept for the mooring buoys on the starboard hand) until the lights of No. 12 lead are seen coming into line; proceed as before by altering the course as the lights are on with each other. The same applies in the change from No. 12 to No. 13 lead. When the lights on the wharves are seen opening out off Luff Point, alter the course so as to round the point at a safe distance, and then up the centre of the channel, looking out for the mooring buoys on the starboard hand.

In going outwards the directions are just the opposite to those given for coming inwards; but in each case, in changing from one lead to another, the course should be gradually altered when abreast of the low (red) Beacon of each lead, except No. 2 lead. In this case, when abreast of No. 3 Beacon, gradually alter the course to a safe distance off No. 2G until the two red lights of No. 2 lead are in line, then proceed outwards with No. 2 lead in line.

By Day.—The directions by day are the same as by night, merely substituting the *Moons* for the *Lights*.

This affects Admiralty Charts 2350 A and B, 1750 and 1752.

During the progress of the work at the Light's Passage Harbour Works, masters of vessels exempt from pilotage may, if they so desire, avail themselves of the services of a pilot to assist them in passing such works, either in or out, at one-half the usual rates.

If the usual exemption flag is not hoisted it will be taken as a signal that a pilot is required. At night if a pilot is required the usual signal for a pilot should be shown.

N.B.—Owing to the nature of the work in progress, this notice may require to be amended from time to time, and therefore should be treated as tentative only.

The total fall from 1st January to 3rd March 1906 ...

The average fall of the corresponding period for 24 years, Surveyor-General's Office ...

The mean pressure, temperature, &c., are deduced from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newiman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formulae.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

AUSTRALIA, SOUTH—GULF OF ST. VINCENT.

Port Adelaide river—Extra Beacons placed—Amended Sailing Directions.

No. 243 (second publication).—With reference to Notice to Mariners No. 62, dated 10th February 1906, issued by this office, the Secretary, Marine Board, Port Adelaide, has given further notice (No. 11 of 1906) that eight extra beacons have been placed on the north and east side of the cutting. The beacons are painted black and the lanterns green, from which a green light showing towards the cutting is exhibited; a white light is also exhibited from the back of each lantern showing towards the shore.

All the green light beacons are numbered from the first or seaward beacon with the letter "G" added as follows:—No. 0G, being outside beacon; No. 1G, near the reflecting beacon; No. 2G, opposite the old boat channel. This light indicates the turning point from No. 2 (red) lead towards No. 3. All the others, that is, Nos. 3G to 8G, both inclusive, are placed opposite the corresponding numbers of the white light beacons on the other side of the cutting.

All the single light beacons are placed about 15 feet back from the cutting, and painted red to starboard and black to port. The lights are white to starboard and green to port from seaward.

The red light on the pile beacon south of No. 3 being no longer required will, on and after the 1st June 1906, be discontinued.

In consequence of the above alterations the sailing directions have been amended to read as follows:—

Sailing Directions.

By night.—In approaching the anchorage, vessels of deep draught should not bring the white light on the old structure to bear north of N. E. by E. in order to avoid the four-fathom patch, which bears N. W. half N. from the light on Wonga Shoal; then get No. 1 lead (which consists of two red lights vertical 10 feet apart, and two white lights vertical 11 feet 9 inches apart) in line; keep these in line passing between the occulting light on the red buoy and the outer green light on the north bank, also between the other green lights on the north bank and the white lights on the revetment mound.

Steer on the same line until the two red lights of No. 2 lead are coming on; then steer with them in line until abreast of No. 2G beacon; then direct the course to pass between No. 3 and No. 3G beacons; and so on from beacon to beacon round the point until No. 9 is reached. From a safe distance off No. 9 the lights of No. 10 lead will be seen; keep them in line until the red light is about a quarter of a point open to the right of the white light of No. 11 lead; then gradually alter the course to bring the lights of No. 11 lead in line; keep them in line (a sharp look out being kept for the mooring buoys on the starboard hand) until the lights of No. 12 lead are seen coming into line; proceed as before by altering the course before the lights are on with each other. The same applies in the change from No. 12 to No. 13 lead. When the lights on the wharves are seen opening out off Luff Point, alter the course so as to round the point at a safe distance, and then up the centre of the channel, looking out for the mooring buoys on the starboard hand.

In going outwards the directions are just the opposite to those given for those coming inwards; but in such case, in changing from one lead to another, the course should be gradually altered when abreast of the low (red) beacon of each lead, excepting No. 2 lead. In this case, when abreast of No. 3 beacon, gradually alter the course to a safe distance off No. 2G until the two red lights of No. 3 lead are in line, then proceed outwards with No. 3 lead in line.

By day.—The directions by day are the same as by night, merely substituting the beacons for the lights.

This affects Admiralty Charts 2330A and B, 1750 and 1752.

During the progress of the work at the Light's 'Passage Harbour Works, masters of vessels exempt from pilotage may, if they so desire, avail themselves of the services of a pilot to assist them in passing such works, either in or out, at one-half the usual rates.

If the usual exemption flag is not hoisted, it will be taken as a signal that a pilot is required. At night if a pilot is required the usual signal for a pilot should be shown.

N.B.—Owing to the nature of the work in progress, this notice may require to be amended from time to time, and therefore should be treated as tentative only.

INDIA, WEST—BOMBAY COAST.

No. 244 (second publication).—The Bombay Government has given notice (No. 65 of 1906) that several blocks of concrete have been washed off the works at the East end of the Ballard Pier Extension somewhat obstructing the passage to the old steps.

2. A small black painted conical Buoy will be moored to mark the end of this obstruction which has a depth on it of 12 feet at Low Water.

3. Vessels approaching this draught should not pass between the Buoy and end of the new Pier Extension works.

This Notice affects Admiralty Chart :—Port of Bombay, No. 655; also West Coast of Hindustan Pilot, 4th edition, 1898, page 301; and Supplement, 1903, page 16.
